eye-share®

Our solution fit with yours – in great harmony!

Get started with a standard integration quickly!

In order to manage accounting and purchasing processes efficiently, data exchange from your business systems must be harmonized with our solutions.

We have over 50 fixed, ready-made integrations to leading ERP systems. This makes it easy for you to get started with our solutions in a smooth, secure, and seamless way. The integrations are delivered safely in the cloud.

With eye-share Workflow, you must always have an integration with the company's financial system. In addition, it may be relevant to connect to other systems such as purchasing, payroll, HR, project, etc., as needed.

How it works:

The integration ensures access to updated master data directly in your finance or purchasing system. This means that our solutions retrieve data and settings from your ERP system, such as suppliers, charts of accounts, departments, projects, etc., so that incoming invoices can be posted in the system. Once the invoice is approved in eye-share Workflow, it is transferred to your ERP system for payment. The integration of your existing accounting, purchasing, payroll, and Human Resource system gives you a flawless operation, updated data, and an automated workflow.

We support a number of integration methods and API

eye-share Workflow has an open API, which makes it possible to integrate the solution with any system that your company uses.

Benefits with our integrations!

Time-saving
Our integration saves a lot of time by transferring data from one system to another, so you do not have to enter data in two systems.

Secure
You can trust the data. The integration makes it easy for you to get insight and overview from several systems at the same time, without you having to think about it.

Future-oriented and profitable
Cloud-based solutions gives you high security, increased availability and automatic updates – and it's easy to connect to multiple systems.
